Only allow the email with @futureandsuns.com to log in; otherwise, display an error message.

After you are added to Google Cloud, you should be able to log in with any Google email. With this implementation, your Google email will not work anymore, since it only allows a specific email domain.

To test:

You can navigate to the main branch and log in with Google, which should lead you to our dashboard. Then you can switch to this branch and try to log in again with Google, but you will not be able to log in.
