

Sprint 5 – Backend: Client Profile Description:

- Returns data split into sections:
 - Client contact info
 - Interaction timeline (history)
 - Billing / transactions
 - Tags
- All sections are loaded from the database (from JSON files until we setup database API)
- Timeline and billing include summary data
- Error handling for missing clients
- Designed so that frontend profile sections are accessible with a single fetch

Files Created:

- backend\data\interactions.json
- backend\data\transactions.json
- backend/src/auth/clients/dto/client-profile.dto.ts

Files Modified:

- backend/src/auth/clients/clients.controller.ts
- backend/src/auth/clients/clients.service.ts

How to Run:

1] cd backend

2] npm install

3] npm run start:dev

Backend is running on http://localhost:3001

TESTING

All Clients and Their Info (Displaying the JSON contents):

<http://localhost:3001/clients>
